INFRASTRUCTURE FOR MODERN MARKETS

Black IntelliSense.

Building the Intelligence Between Liquidity and Markets

OVERVIEW

What We'll Cover

01 The Problem

Fragmentation between liquidity sources, execution systems, and settlement workflows

02 Our Philosophy

Four core principles that guide everything we build

03 Vision & Mission

Where we're headed and how we plan to get there

04 Our Products

Three integrated solutions for modern trading infrastructure

05 Why Black IntelliSense

The competitive advantages that set us apart in the market

CHAPTER 01

The Problem

Fragmentation in modern financial markets creates inefficiencies that cost institutions time, money, and competitive advantage

THE CHALLENGE

The Fragmentation Challenge

The Core Problem

Modern financial institutions operate in an increasingly fragmented ecosystem. Liquidity sources are scattered across multiple venues, execution systems operate in silos, and settlement workflows remain manual and error-prone. This fragmentation creates operational complexity that drains resources and introduces risk.

Institutions are forced to manage multiple disconnected systems, each with its own interface, data format, and operational requirements. The result is a patchwork infrastructure that hinders scalability and competitive positioning.

Disconnected Systems

Multiple platforms that don't communicate effectively

Manual Workflows

Human-dependent processes that slow operations

Operational Risk

Increased exposure to errors and reconciliation issues

Liquidity Fragmentation

Market makers and liquidity providers operate across disparate venues, making price discovery and best execution increasingly complex

Execution Silos

Trading systems that don't integrate create latency, missed opportunities, and suboptimal routing decisions

Settlement Complexity

Post-trade operations remain heavily manual, creating bottlenecks and increasing operational risk exposure

CHAPTER 02

Our Philosophy

Four principles that guide every decision we make and every product we build

GUIDING PRINCIPLES

What We Believe

PRINCIPLE 01

Infrastructure First, Not Brokerage

We build technology that powers operations, not competing services. Our focus is on providing the underlying infrastructure that enables institutions to operate more efficiently without changing how they trade or disrupting their existing client relationships.

"We enable your business, we don't compete with it"

PRINCIPLE 02

Automation With Human Control

Technology should handle repetitive tasks while preserving dealer judgment. Our systems automate workflows but keep humans in control of critical decisions, ensuring that expertise and oversight are never compromised by efficiency gains.

"Automate the routine, elevate the human"

PRINCIPLE 03

Accuracy Over Speed Alone

Precision matters more than raw velocity. We prioritize getting it right over getting it fast, because in institutional trading, a millisecond advantage means nothing if the execution is wrong. Our systems deliver both speed and accuracy without compromise.

"Fast is good, right is essential"

PRINCIPLE 04

Scalability Without Operational Complexity

Growth should not require proportional increases in operational overhead. Our modular architecture allows institutions to scale volume, assets, and clients without scaling headcount or operational risk. Complexity is managed by the system, not your team.

"Grow your business, not your burden"

CHAPTER 03

Vision & Mission

Where we're headed and the concrete steps we're taking to get there

OUR VISION

The Future We're Building

Our Vision Statement

To become a trusted infrastructure provider that connects liquidity, execution, and settlement into a single intelligent layer for global financial markets.

Trusted Partner

Building long-term relationships based on reliability, transparency, and consistent performance that institutions can depend on

Unified Layer

Creating seamless connectivity between all components of the trading lifecycle, eliminating fragmentation and silos

Intelligent Systems

Leveraging automation and smart workflows to reduce manual intervention while preserving human oversight and control

Global Market Coverage

Our vision extends across crypto assets, foreign exchange, and derivatives markets worldwide

OUR MISSION

How We Get There

01 Build High-Performance Bridge Technology

Connect Market Makers and Liquidity Providers with Brokers and OTC desks through robust, low-latency infrastructure that ensures seamless price discovery and execution

02 Deliver Accurate, Real-Time Price Aggregation

Provide best-price routing and execution across crypto and foreign exchange markets with configurable logic that adapts to each institution's unique requirements

03 Simplify OTC Trading Operations

Build professional, dealer-controlled platforms that eliminate manual messaging and exchange application dependencies, streamlining the entire OTC workflow

04 Payment Reconciliation

Reduce manual post-trade work while maintaining full transparency and operational control through intelligent comprehensive audit trails

05 Enable Scalable Multi-Asset Trading

Support growth across asset classes and trading volumes through modular, reliable systems that scale without proportional increases in operational complexity

CHAPTER 04

Our Products

Three integrated solutions that form a complete trading infrastructure ecosystem

PRODUCT 01

Sense 50: Bridge Engine

High-Performance Price Aggregation & Execution Bridge Engine

What It Does

Sense 50 is the core bridge technology that aggregates real-time price feeds from multiple liquidity venues, applies configurable execution logic, and delivers best-price routing with full dealer control.

Designed to connect Market Makers and Liquidity Providers with Brokers and OTC desks, Sense 50 acts as the intelligent layer between liquidity sources and execution endpoints.

Low Latency

Sub-millisecond price aggregation and routing

Configurable

Flexible rules tailored to your requirements

Reliable

Enterprise-grade uptime and failover

Key Capabilities

- Multi-LP and multi-exchange price aggregation
- Best bid/ask discovery across all connected venues
- Execution rules and parameters (spread, slippage, size)
- API-based trade execution with full dealer control
- Real-time price feed distribution to downstream systems

Markets Supported

Crypto Assets
Spot markets

Additional asset classes in development

PRODUCT 02

IntelliTrade: OTC Trading Platform

Professional OTC Trading Interface for Institutional Environments

What It Does

IntelliTrade is a professional OTC trading interface built for institutional and high-volume environments. It enables brokers and OTC desks to offer live pricing and execution to clients without relying on manual messaging or exchange applications.

The platform connects directly to Sense 50 for real-time pricing while giving dealers full control over markup models, risk management, and client interactions.

Live Pricing

Real-time rates from Sense 50 engine

Markup Control

Dealer-controlled pricing models

Client Portal

Professional OTC-style UX

Key Capabilities

- Live OTC pricing sourced directly from Sense 50
- Dealer-controlled markup models with flexible configuration
- Client trading dashboard with professional OTC-style UX
- Secure trade execution and confirmation workflows
- Integrated reporting and comprehensive activity tracking

Supported Workflows

Crypto Assets
Spot Markets

Designed for minimal friction and maximum operational efficiency

ECOSYSTEM

The Integrated Ecosystem

How Our Products Work Together

Sense 50

Bridge Engine

Aggregates prices from multiple LPs and exchanges

↓

IntelliTrade

OTC Platform

Delivers live pricing and execution to clients

Unified Infrastructure

Our three products form a complete trading infrastructure ecosystem that covers the entire lifecycle from price discovery to settlement.

- **Seamless Data Flow:** Information moves automatically between systems
- **Single Source of Truth:** Consistent data across all platforms
- **Reduced Complexity:** One integrated system instead of multiple vendors
- **Operational Efficiency:** Streamlined workflows from trade to settlement

LPs & MMs

Liquidity Providers & Market Makers

Brokers

Execution & Client Management

OTC Desks

High-Volume Trading Operations

CHAPTER 05

Why Black IntelliSense

The competitive advantages that set us apart in the market

COMPETITIVE ADVANTAGES

Our Competitive Edge

Infrastructure-First Approach

We don't compete with our clients

Unlike brokerages that offer technology as a side product, we focus exclusively on building infrastructure. This means no conflicts of interest, no competing for your clients, and a genuine partnership focused on your success.

"Your success is our only business model"

Modular Architecture

Use what you need, scale as you grow

Our products work together as an ecosystem but can also operate independently. Start with Sense 50, add IntelliTrade, then MarkCRM as your needs evolve. No rip-and-replace required.

"Grow at your own pace, not ours"

Institutional-Grade Reliability

Built for production environments

Our technology is engineered for high-volume, low-latency production environments. Enterprise-grade uptime, comprehensive monitoring, and robust failover ensure your operations never miss a beat.

"Production-ready from day one"

API-First Design

Integrate with your existing stack

Our APIs are designed for seamless integration with your existing systems. No need to change your workflows or retrain your team. Black IntelliSense adapts to how you work, not the other way around.

"Technology that fits your business"

The Black IntelliSense Difference

We don't just provide tools—we provide a complete infrastructure partnership that grows with your business

LET'S BUILD THE FUTURE
